

ENVIRONMENTAL SUSTAINABILITY
(B205, 206, R2001, R2007)

Policy Statement

The American Society of Landscape Architects believes that both human civilizations and the natural ecosystems represent integral parts of our environment, and therefore must be protected, restored, and perpetuated.

In order to provide a healthy, productive, and socially enriching life for all, the Society urges public and private decision makers to employ sustainable design policies and practices, minimize environmental degradation, avoid excessive consumption, and respect the needs of future generations.
