

Altitude Land Consultants is actively seeking a qualified individual with a degree in landscape architecture, urban design or horticulture to work full-time in our Colorado Springs office at Lincoln Center. Applicant must be proficient in computer software for landscape design (AutoCAD, ideally with experience with Land F/X). The ideal candidate has between 1-4 years of experience.

We are a relatively small, yet growing, company with just over 20 employees spread between our two offices in Colorado Springs and Denver. We are a multi-disciplinary site development firm (Landscape Architecture, Urban Design, Civil Engineering and Land Surveying) focusing primarily on private development along the Front Range of Colorado. We have a wide variety of project types from private infill development, to parks and trails and open space. Our current projects include the several infill multi-family residential projects in Colorado Springs and the Denver Metropolitan area, commercial infill projects (some with green roofs), high-end residential design, park design, a trails master plan and corridor redevelopment master planning.

Qualified applicants are self-driven and passionate for quality design and work product. To date, our Colorado Springs office includes two licensed landscape architects, three landscape designers and a contract employee who works remotely from Germany. Also worth mentioning are the frequent office dogs...we generally have at least one in the office at any given time. We offer a fun and collaborative work environment, with unique office space in the Lincoln Center. Besides our office, the Lincoln Center (formerly an elementary school) also houses a coffee shop, bakery, cafe, brewery, barbershop, pilates/massage studio, chiropractor, a commercial developer, a real estate office, cross fit gymnasium, along with other businesses still to come.

All inquiries shall be directed to our Director of Urban Design and Landscape at 719.231.3959 or by email at John@AltitudeLandCo.com.
